

2007 Allure 430 Owner Modifications (#31466)

We had the shelf removed and three slideout trays added.

Bottom tray for large pots

Middle tray for electrical items.

Top tray for lids.

We had a leaf built for the table (underside shown here). Table now extends 21 inches from its fully closed position.

View of underside of table. By offsetting the table, removing a slide limit, gluing the top down to the slider, and adding a screw-in leg, we were able to get space to add another leaf.

Table fully extended and leaf being inserted. Notice the offset of the table top on the leaf.

Table fully extended but without the leg attached that should be used when it is fully extended. Now company does not have to have their chairs partly on the slide and partly on the floor.

This sofa comes with terrible back cushions just stuffed with batting.

We had the batting removed and foam inserts (wrapped lightly in batting) added. Now we can sit upright.

Various Intellitec switch panels were not fully programmed. This bath hall switch did not allow you to turn on the bedroom light. You had to enter half way into the bedroom to turn it on or off. Here the top three buttons are in a logical sequence for walking to the rear or front of coach and turning on/off lights. Also added the Vanity light switch. These switches can be re-programmed by the techs.

I love the ridged sewer hose which expands and flexes while retaining its memory. Available from Camping world. Get the **swivel** male and female connectors for the ends

The connection of an elbow at the proper angle is pot-luck when assembling these coaches. I took a Clearview extension, cut out the center section to the proper length, and used wonderful **J-B Weld Epoxy** (available at hardware stores) to glue the two end pieces together and at the proper twist angle.

Now the clear elbow points directly through the utility hole.

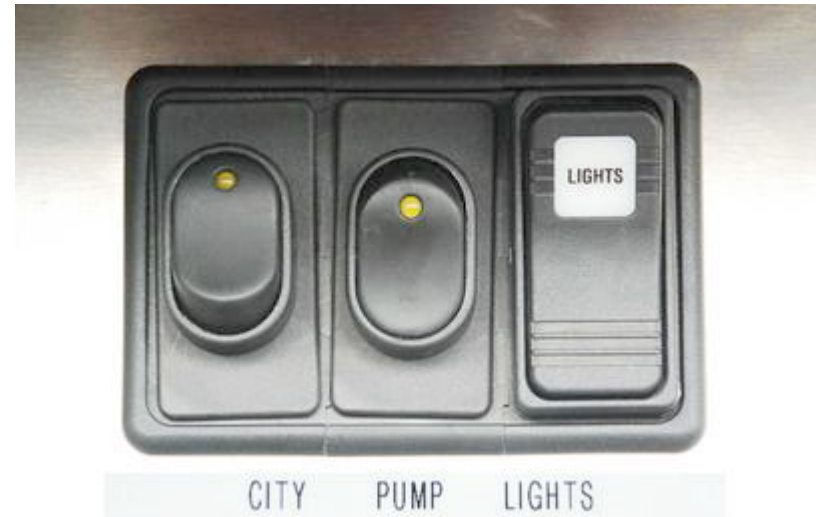

This 1000 sheet SCOTT TISSUE is RV Friendly as shown on the label. A lot cheaper than RV Tissue found at Camping World, etc.

The toilet flush button was hard to located. I added a felt furniture pad over the button.

This gives me an easy backwash, and I believe it is safe. Each tank has a check valve, a ball valve, and the vacuum breaker on the faucet.

Added an electric water valve for city water. The two switches control whether the Water Pump switch in the coach provides power to the water pump and/or electric city water valve. Now when you sleep or leave the coach, turn off the Water Pump switch in the coach, and your coach will be safe from inside flooding in the event of a pipe break. No need to remember to turn off/on the city water faucet when you leave.

Red Hat **12 Volt** metal electric water valve available from CC Parts. No transformers are needed.

Computer desk installed by Davis Cabinet. Very deep letter file and drawers. Dell Mini-tower is in credenza

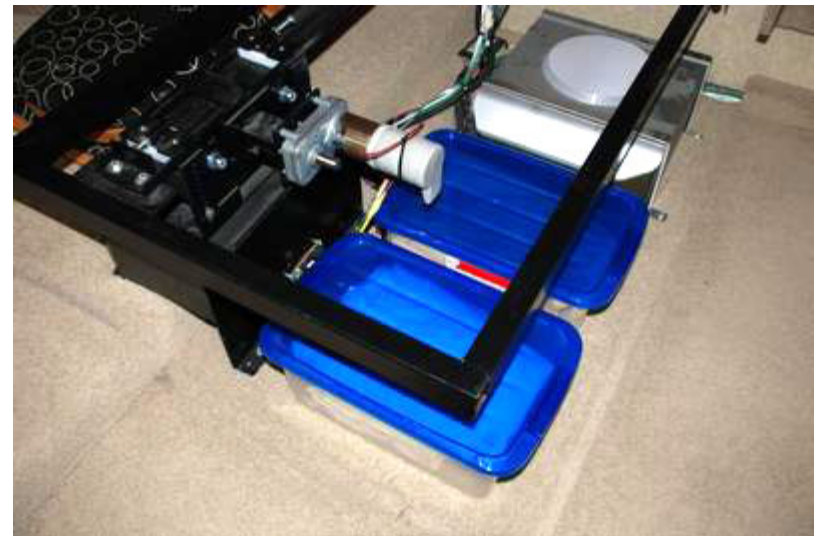

Modified to allow the door to be opened at any time (be careful). Now you can add the last sock before the water fills, or test the clothes for dryness with waiting or baking them. See www.where-rv-now.us/splendide for modification instructions.

Step in bedroom was unlit. A simple night light can be added at the end of the bed, and powered from one of the bedside outlets. Here it is a button night light at the end of an extension cord.

There is also room for one folding chair under the bed. A Velcro strap was screwed to the floor and wraps the cushion to secure for transit.

Next to the Subwoofer under the bed (who needs one of these in the bedroom), two tupperware containers were screwed to the floor for storage. They do not interfere with the slide.

Easy way to rain the mud-flap when backing up. A short length of rope with loops to hook over a couple of existing bolts on the back side of the mud flap. No more dragging and scraping when backing into some sites, especially with the tag axle up.

The rope

Secure the wardrobe door with wood dowling. We had one pop open and slam, destroying one mirror.

Nice 5x7 rug with, by luck the CC logo shapes. We lay it over our regular rug. When we bring the slides in, we fold the two sides inward (into thirds) and walk down the aisle on the carpet back.

Found this beautiful Bach Solo kitchen faucet on e-bay.

The Allure 430 2007 & 2008 come with inexpensive Fantastic fans without temp control. Fantastic makes a RF Remote control upgrade (6600R). Now we can set a temp for it to run and slows down to a stop. Great for overnight cooling, or while you are away for the day.

For more details about these changes, contact: Herb Strandberg, 916-759-8000, yahoo4herb@where-rv-now.us
